TO WHOM THIS MAY CONCERN,

Hello, I am a junior year Computer Information Systems Specialist searching for a Programming Development position, preferably in the iOS field. I am excited about my entrance into the professional IT arena and am seeking a positions where the job requirements are aligned with my ambitions to gain more knowledge and strength in my Software Development skills.

Programming has been a passion of mine since senior year of high school, and more specifically iOS, Android, and web development are amongst the top forms that I practice every day. Currently, at home my workflow consists of constantly rewriting popular apps such as Instagram, twitter, tinder, etc. only after finishing homework, of course. I am also well versed with the Firebase, and Amazon Web Service Databases for backend. Additionally, at the end of each semester, I travel with the Navy to assist in setting up networks along with other IT duties. There's no doubt in my mind that my skill set would drastically increase your companies' value, and function with my knowledge of programming/IT as well as Navy leadership skills.

I'd love to interview for any software development position, preferably in the iOS genre moreover, I'd also like the opportunity to talk with a recruiter to gather more knowledge about the company and any possible plans in the future. I will call in two weeks to follow up, and if there's any additional information required from me I'd be glad to assist. Thanks for your time and consideration.

Sincerely,

Christopher Norman

Christopher J. Norman

Objective: Seeking software development position, utilizing knowledge of multiple coding languages as well as military experience

Education:

Bachelor of Science in Computer Information Systems   Dec 2020
   Minor: Computer Science
   University of Houston- Houston, Texas
Navy Information Technology A-School   Nov 2015
   Pensacola, Florida

Computer Skills:

Programming Languages: Swift, Python, HTML 5, CSS 3, C++, Java, VB.NET, SQL, JavaScript, C#
Software: XCode, Visual Studio, IntelliJ, Eclipse, Atom, Xamarin, VS Code, VMWare, Sketch
Operating Systems: Mac OS, Windows, Linux Red Hat, iOS, Android,

Experience:

Free Lance App Developer (Jun 2015 – Present)

Peek - Developed job searching app from ground up as CTO of Peek using XCode and Swift.

Facebook, Instagram, and Tinder Clones - Recreated multiple social media apps all developed in XCode and Swift with the Google Firebase Database as backend.

Adidas Python Bot - Edited Python bot to purchase 15 pair of high-end sneakers from the Adidas website.

Information Technology Specialist US Navy (Jun 2014 – Present)
- Conducted general IT duties such as building networks, troubleshooting computers, and Securing data
- Lead a team of three to install fiber optic cabling for multiple secure buildings
- Assisted in managing 180 users on a government network for 50+ work hours
- Set-up 30+ workstations for government training events

Academic Projects:

Database Management Projects (Aug 2018 – Dec 2018), UH
- Completed 8 database management assignments demonstrating concepts such as binary, bubble, insertion, and various other database searching algorithms

Designed Website (Jan 2017 – May 2017), Lonestar
- Developed custom website from scratch using HTML 5 and CSS 3 using Model-View-Controller architecture

Relevant Coursework:

Database Management	Java Programming	Swift Programming
C++ Programming	VB.NET Programming	C# Programming

Activities: Member of Cougar CS Organization (Jan 2017 – Dec 2018)

Honors: Scholarship TechKnowledge Consulting Spring 2017
